

Innovation made in Germany the TIS GmbH in Bocholt

The TIS GmbH in Bocholt is one of the market leaders in sophisticated Telematics projects. TIS stands for Technical Information Systems. For 30 years now we develop intelligent Telematics solutions for forwarding agencies, transport and logistics enterprises as well as retail chains. Our work is inspired by the passion for technology - and the goal to develop viable and efficient solutions for the everyday challenges of our customers. Whenever you need to manage processes or make them more profitable, wherever you want to transfer data wirelessly, we are there for you. We transform your ideas into technologies that adjust optimally to your infrastructure and work with utmost reliability. The latest generation of products from TIS are the platform independent software solutions under the brand name TISLOG.

TISLOG[®] Logistics & Mobility

Efficient processes on the go, in turnover and the office.

100% adjustable and scalable

Always exactly tailored to your needs: Thanks to flexible data models TISLOG mobile quickly and cost efficiently adjusts to different customer requirements - by more than 50.000 possible configuration parameters and a variety of available software add-on modules.

future-ready

Use your favored hardware – our software always fits like a glove. TISLOG provides for platform independent software systems that can flexibly adjust to any of your technical requirements.

comfortable handling

Skip extended staff training with TISLOG mobile: The mobile devices are self-explanatory. Thanks to an intuitive user interface and logical architecture of TISLOG your drivers are ready to go instantly and will be guided through the processes by the software.

TISLOG offers powerful and flexible solutions for your mobile order management that are capable of exactly what you need for the individual workflows of your business. Because the extreme scalability of TISLOG allows for a tremendously flexible design of all mobile processes. Rely on gapless control over flows of goods along the entire supply chain and secure data exchange between drivers, vehicles and headquarters at any time with TISLOG.

Our TISLOG solutions map all technical requirements reliably - regardless of the operating system in use or given hardware requirements.
